MULTI-FAMILY / COMMERCIAL INSTALLATION REQUIREMENTS - PRIMED & COLORPLUS® PRODUCTS

SCHEDULE FOR INSTALLATION:

1. Position cutting station so that wind will blow dust away from user and others in working area.
2. Cut only using score and snap, or shears (manual, electric or pneumatic).
3. Position cutting station in a well-ventilated area.

INDOORS:

1. NEVER cut with power saws indoors.
2. Cut only using score and snap, or shears (manual, electric or pneumatic).
3. Position cutting station in well-ventilated area.

GENERAL REQUIREMENTS:

- Refer to table 1 for James Hardie’s multifamily/commercial drainage requirements.
- HardiePanel® vertical siding can be installed over braced wood or steel studs spaced a maximum of 2 ft. (610mm) o.c. Irregularities in framing and sheathing can mirror through the finished application.
- Consult ESRI1844 for fastener schedule as well as additional technical information at www.jameshardiecommercial.com.
- A water-resistive barrier is required in accordance with local building code requirements. The water-resistive barrier must be properly installed with penetration and junction flashing in accordance with local building code requirements. James Hardie will assume no responsibility for water infiltration. James Hardie does market HardieWrap® Weather Barrier, a non-woven non-perforated housewrap, which complies with building code requirements.
- Do not install James Hardie products, such that they may remain in contact with standing water.
- Do NOT use HardiePanel vertical siding in Fascia or Trim applications.
- The designer and/or architect shall take into consideration the coefficient of thermal expansion and moisture movement of the product in their design. These values can be found in the Technical Bulletin #8 “Expansion Characteristics of James Hardie® Siding Products” at www.jameshardiecommercial.com.

1 Water-resistive Barrier and drainage requirements as defined by building code.
2 Water-resistive Barrier as defined by local building code that is manufactured in a manner to enhance drainage, must meet minimum 90% drainage efficiency when tested in accordance with ASTM E2273 or other recognized national standards.
3 Water-resistive Barrier (WRB) as defined by building code.

**DANGER:** Do not breathe dust from this product. Respirable Crystalline Silica Dust causes damage to lungs and respiratory system through prolonged or repeated inhalation.

Floor cement is not a health hazard when handled or stored in its original, unaltered condition. The hazard associated with floor cement arises from crystalline silica present in the dust generated by activities such as cutting, rebating, drilling, routing, sawing, crusting, or otherwise abrating the floor cement, and when breathing dust that is generated while using one of these activities in a manner that generates dust. The user should consult James Hardie’s technical bulletin to minimize exposure.

COM1220-P1/4 12/15
INSTALLATION:
- HardiePanel vertical siding must be joined on stud.
- Position fasteners 3/8 in. (9.5mm) from panel edges and no closer than 2 in. (50mm) away from corners.

JOINT TREATMENT
- Vertical Joints - Install panels in moderate contact (fig. 1); alternatively joints may also be covered with battens or caulked (Not applicable to ColorPlus® Finish) (fig. 2).
- Horizontal Joints - Provide positive slope Z-flashing at all horizontal joints (fig. 3).

Refer to Table 1 for correct installation condition

Water Resistant Barrier Condition

Drainage Plane/Wrap Condition

Furring/Rainscreen Condition

* Apply caulk in accordance with caulk manufacturer’s written application instructions.
** Furring as prescribed in Table 1.
*** WRB or Drainage Plane as prescribed in Table 1.
CLEARANCES
Install siding and trim products in compliance with local building code requirements for clearance between the bottom edge of the siding and the adjacent finished grade.

Figure 5 Siding

Maintain a minimum 2 in. (50mm) clearance between James Hardie® products and paths, steps and driveways.

Figure 6

Maintain a minimum 2 in. (50mm) clearance between James Hardie® products and decking material.

Figure 7

At the juncture of the roof and vertical surfaces, flashing and counterflashing shall be installed per the roofing manufacturer's instructions. A minimum 2 in. (50mm) clearance between the roofing and the bottom edge of the siding and trim.

Figure 8

Maintain a 1/4 in. (6mm) clearance between the bottom of James Hardie products and horizontal flashing. Do not caulk gap. (refer to figure 3 on page 2)

Figure 9

Maintain a minimum 1 in. (25mm) gap between gutter end caps and siding & trim.

KICKOUT FLASHING
Because the volume of water that can pour down a sloped roof, one of the most critical flashing details occurs where a roof intersects a sidewall. The roof must be flashed with step flashing. Where the roof terminates, install a kickout to deflect water away from the siding. It is best to install a self-adhering membrane on the wall before the subfascia and trim boards are nailed in place, and then come back to install the kickout. Figure 11, Kickout Flashing

*To prevent water from dumping behind the siding and the end of the roof intersection, install a "kickout" as required by IRC code R905.2.8.3 : "...flashing shall be a min. of 4" high and 4" wide." James Hardie recommends the kickout be angled between 100° - 110° to maximize water deflection.

Figure 10

Note: Furring shown is as a best practice or as prescribed per Table 1.

GENERAL FASTENING REQUIREMENTS
Fasteners must be corrosion resistant, galvanized, or stainless steel. Electro-galvanized are acceptable but may exhibit premature corrosion. James Hardie recommends the use of quality, hot-dipped galvanized nails. James Hardie is not responsible for the corrosion resistance of fasteners. Stainless steel fasteners are recommended when installing James Hardie products near the ocean, large bodies of water, or in very humid climates.

Note: When utilizing express seam joints ensure adequate nailable substrate width is available.

- Consult applicable code compliance report for correct fastener type and placement to achieve specific design wind loads.
- NOTE: Published wind loads may not be applicable to all areas where Local Building Codes have specific jurisdiction. Consult James Hardie Technical Services if you are unsure of applicable compliance documentation.
- Drive fasteners perpendicular to siding and framing.
- Fastener heads should fit snug against siding (no air space). (fig. A)
- Do not over-drive nail heads or drive nails at an angle.
- If nail is countersunk, fill nail hole and add a nail. (fig. B)
- For wood framing, under driven nails should be hit flush to the plank with a hammer (for steel framing, remove and replace nail).
- NOTE: Whenever a structural member is present, HardiePanel siding should be fastened with even spacing to the structural member. The tables allowing direct to OSB or plywood should only be used when traditional framing is not available.
- Do not use aluminum fasteners, staples, or clipped head nails.

Snug
Flush
Countersunk, Fill & add nail
DO NOT drive nails
DO NOT STAPLE

PNEUMATIC FASTENING
James Hardie products can be hand nailed or fastened with a pneumatic tool. Pneumatic fastening is highly recommended. Set air pressure so that the fastener is driven snug with the surface of the siding. A flush mount attachment on the pneumatic tool is recommended. This will help control the depth the nail is driven. If setting the nail depth proves difficult, choose a setting that under drives the nail. (Drive under driven nails snug with a smooth faced hammer; does not apply for installation to steel framing).

CUT EDGE TREATMENT
Caulk, paint or prime all field cut edges. James Hardie touch-up kits are required to touch-up ColorPlus products.

CAULKING
For best results use an Elastomeric Joint Sealant complying with ASTM C920 Grade NS, Class 25 or higher, such as Quad Max® or a Latex Joint Sealant complying with ASTM C834. Caulking/Sealant must be applied in accordance with the caulking/sealant manufacturer’s written instructions.

Note: DO NOT caulk nail heads when using ColorPlus products, refer to the ColorPlus touch-up section.

PAINTING
DO NOT use stain on James Hardie products. James Hardie products must be painted within 180 days for primed product and 90 days for unprimed. 100% acrylic topcoats are recommended. Do not paint when wet. For application rates refer to paint manufacturers specifications. Back-rolling is recommended if a paint sprayer is used.
COLORPLUS® TECHNOLOGY CAULKING, TOUCH-UP & LAMINATE

- Care should be taken when handling and cutting James Hardie ColorPlus products.
- Laminate sheet must be removed immediately after installation of each course. Gently wipe any residue or construction dust left on the product using a soft cloth.
- Touch up nicks, scrapes and nail heads using the ColorPlus Technology touch-up applicator. Touch-up should be used sparingly. If large areas require touch-up, replace the damaged area with new HardiePanel siding with ColorPlus Technology.
- Terminate non-factory cut edges into trim where possible, and caulk. Color matched caulks are available from your ColorPlus product dealer.
- Treat all other non-factory cut edges using the ColorPlus Technology edge coaters, available from your ColorPlus product dealer.

Note: Use of touch-up on fasteners on the face of ColorPlus panels should be avoided. Do not caulk joint between ColorPlus panels.

Note: James Hardie does not warrant the usage of third party touch-up or paints used as touch-up on James Hardie ColorPlus products. Problems with appearance or performance arising from use of third party touch-up paints or paints used as touch-up that are not James Hardie touch-up, will not be covered under the James Hardie ColorPlus Limited Finish Warranty.

Not all designs will be suitable for every application.

PAINTING JAMES HARDIE SIDING AND TRIM PRODUCTS WITH COLORPLUS TECHNOLOGY

When repainting ColorPlus products, James Hardie recommends the following regarding surface preparation and topcoat application:

- Ensure the surface is clean, dry, and free of any dust, dirt, or mildew
- Repriming is normally not necessary
- 100% acrylic topcoats are recommended
- DO NOT use stain or oil/alkyd base paints on James Hardie products
- Apply finish coat in accordance with paint manufacturer's written instructions regarding coverage, application methods, and application temperature
